

How do I know if my water softener is time clock-based?

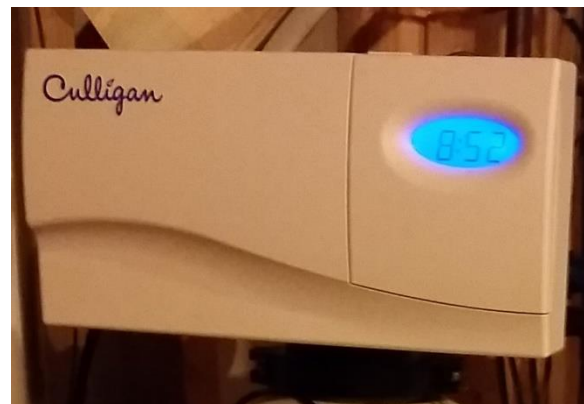

Time clock-based (Rebate eligible)

- Regenerates at set interval of days
- Has a dial (skipper wheel) with numbers and arrow to set for days between regenerations

Demand-initiated

- Recharges based on water use
- May be electronic or manual
- If manual, program wheel is set to hardness and number of people in household

- Most water softeners with digital control valves are demand-initiated
